

AMARE 2019

Published on February 1, 2019 – Updated on February 4, 2019

The image shows a promotional banner for the AMARE 2019 conference. The banner is divided into several sections. On the left, there is a blue background with chemical equations: $Ag_2O + 2HClO_2 \rightarrow 2Ag^+ + 2ClO_2^- + H_2O$ and $Ag_2O_2 + 4e^- + 6H^+ = 2Ag^+ + 3H_2O$. Below the equations are various chemical symbols and icons, including a water drop, a DNA helix, a beaker, and a molecular structure. The text 'Ecole Nationale Supérieure de Chimie de Rennes' is visible. In the center, there is a periodic table of elements. On the right, a blue box contains the text 'AMARE 2019 International Conference on Applications of Multi-scale Approaches in Environmental Chemistry April 23-25 2019 Rennes, France'. Below the banner, there are logos for CNRS, CFM (Centre Français des Modèles), and the 100th anniversary of the Ecole Nationale Supérieure de Chimie de Rennes (1919-2019).

Date

Du 23 April 2019 au 25 April 2019

International conference on Applications of Multi-scale Approaches in Environmental chemistry 23-25 April 2019, Rennes, France

The Institute of Chemical Sciences of Rennes and the Institute of Chemistry of Clermont-Ferrand would like to invite you to participate in international conference AMARE 2019, which will take place in Rennes, France. This event was supported by CNRS PRC project (CNRS No. 270437) and ENSCR. The purpose of this conference is to stimulate the communication between researchers from different countries and exchange opinions in the field of common interests. The conference will provide a forum to share research results, and discuss new experimental and theoretical developments in environmental chemistry. This meeting will focus on combined experimental and modeling studies of thermodynamics and kinetics of environmental reactions, and thus propose a multi-scale methodology to connect molecular level to large-scale in environmental fate models that account for chemical and physical heterogeneities.

Abstract submission deadline : **1st March 2019**

The list of topics includes (but is not limited to) :

- Environmental Analytical Chemistry
- Nanoparticle Applications & Uses
- Computational Chemistry Applied to Environmental Chemistry
- Reactive Transport & Modeling
- Thermodynamic & Kinetic Simulations
- Environmental Photochemistry
- Membrane Processes for Sustainable and Environmental Chemistry
- Chemical Materials & Engineering
- Catalysts & Environmental Catalysis
- Water Treatment & Soil Remediation
- Advanced Oxidation Processes
