

Photochemistry

Leader: [Sandrine THERIAS](https://iccf.uca.fr/annuaire/sandrine-therias)(<https://iccf.uca.fr/annuaire/sandrine-therias>), CNRS research director

Research subjects

The research is devoted to the degrading effects of light and aims to describe the mechanisms involved in the photoaging of polymers and in the phototransformation of micropollutants.

The research projects relate to three major themes:

[CVP](https://iccf.uca.fr/english-version/research/photochemistry/polymers-life-cycle)(<https://iccf.uca.fr/english-version/research/photochemistry/polymers-life-cycle>): Polymers Life Cycle

[POPPI](https://iccf.uca.fr/english-version/research/photochemistry/polymers-photochemistry-properties-and-interfaces)(<https://iccf.uca.fr/english-version/research/photochemistry/polymers-photochemistry-properties-and-interfaces>): POLymers, Photochemistry, Properties and Interfaces

[PRE](https://iccf.uca.fr/english-version/research/photochemistry/photochemistry-reactivity-and-environment)(<https://iccf.uca.fr/english-version/research/photochemistry/photochemistry-reactivity-and-environment>): Photochemistry, Reactivity and Environment

We are always happy to welcome students from technical trainings, BSc, MSc, engineer schools... for internship. If you are interested, contact us!
